

Equipment servicing courses

Informative, practical training

In order to provide you with the ability to service your own Carnét equipment, BOC run equipment servicing courses. These courses have been running successfully over the years and have provided invaluable knowledge and experience to hundreds of attendees working with Carnét medical gas control products.

The service course is predominantly aimed at medical engineers, however any person working with gas control products can attend. The main emphasis of the course is on the “hands on” experience of Carnét products, delivering a practical and accessible style of learning. Each attendee has their own fully equipped workstation allowing them to strip down and carry out service on a range of Carnét products.

The course also gives a detailed overview of the risks associated with high pressure regulators, and also looks at the standard ISO 15001 – Oxygen Compatibility.

Comprehensive notes and service manuals are supplied, as well as the chance to gain an in depth insight and understanding of the products from our Design Team. No prior experience or qualifications are required to attend the course, just a willingness to learn.

Features and benefits

- Hands on experience of servicing Carnét products
- Comprehensive notes and service manuals
- Practical and accessible style of learning
- Includes service module for ENTONOX® demand valve
- Accommodation and evening meal included
- The opportunity to network with other medical engineers
- Introduction to suction and oxygen therapy product range
- Pressure regulator servicing – repair and PPM*
- Dial-flow regulator servicing – repair and PPM*
- Dial-flowmeter and micro dial-flowmeter servicing – repair and PPM*
- FireSafe™ flowmeter – repair procedures
- ENTONOX® demand valve servicing – repair and PPM

* Planned Preventative Maintenance
